Streamlined Design- The IRIS look and function have been enhanced with our new rocker design, black hardware and welded casters.

The IRIS now offers 2 tilt ranges. The IRIS provides a 55° range of rotation with the standard rocker arm or a 40° range with the subtlety and decreased weight of the new, shorter rocker arm.

Lightweight- The new Quickie IRIS is the lightest positioning wheelchair on the market. With more than 5 lbs of reduced weight, the IRIS is even easier to transport and maneuver.

FEATURES

A new **Foot Release Tilt Actuator** eliminates exposed cables. Also available, the existing hand triggers feature a special new **Cable Management System** that separates the cables from moving parts and opens space for additional options.

Low Seat-to-Floor Height- With our new caster design, low caster fork and small caster wheel options, the Quickie IRIS can achieve a seat-to-floor height as low as 12.5". This provides easier access to tables, desks and counters as well as enhanced floor access for foot propulsion.
